

Odyssey Elementary

Odyssey Elementary
Ogden, Utah
72,300 Square Feet
Completed in August 2007

The Odyssey elementary is the flagship of a new series of magnet schools within the Ogden School District. The school distinguishes itself by supplying course curricula and activities specifically designed to emphasize the development of math and science skills with an emphasis on space exploration. The building features traditional classroom and computer learning facilities on the first level, including a community learning center, and facilities for a full time space camp on the second level. The space camp features a Newton chair, where students can experience the effects of increased gravity and centrifugal forces, specially designed rooms for simulating life on a space station and activities in mission control, and a full scale replica of the space shuttle which houses a cockpit flight simulator and rooms for performing science experiments.
